Universal Power
Procedures Table

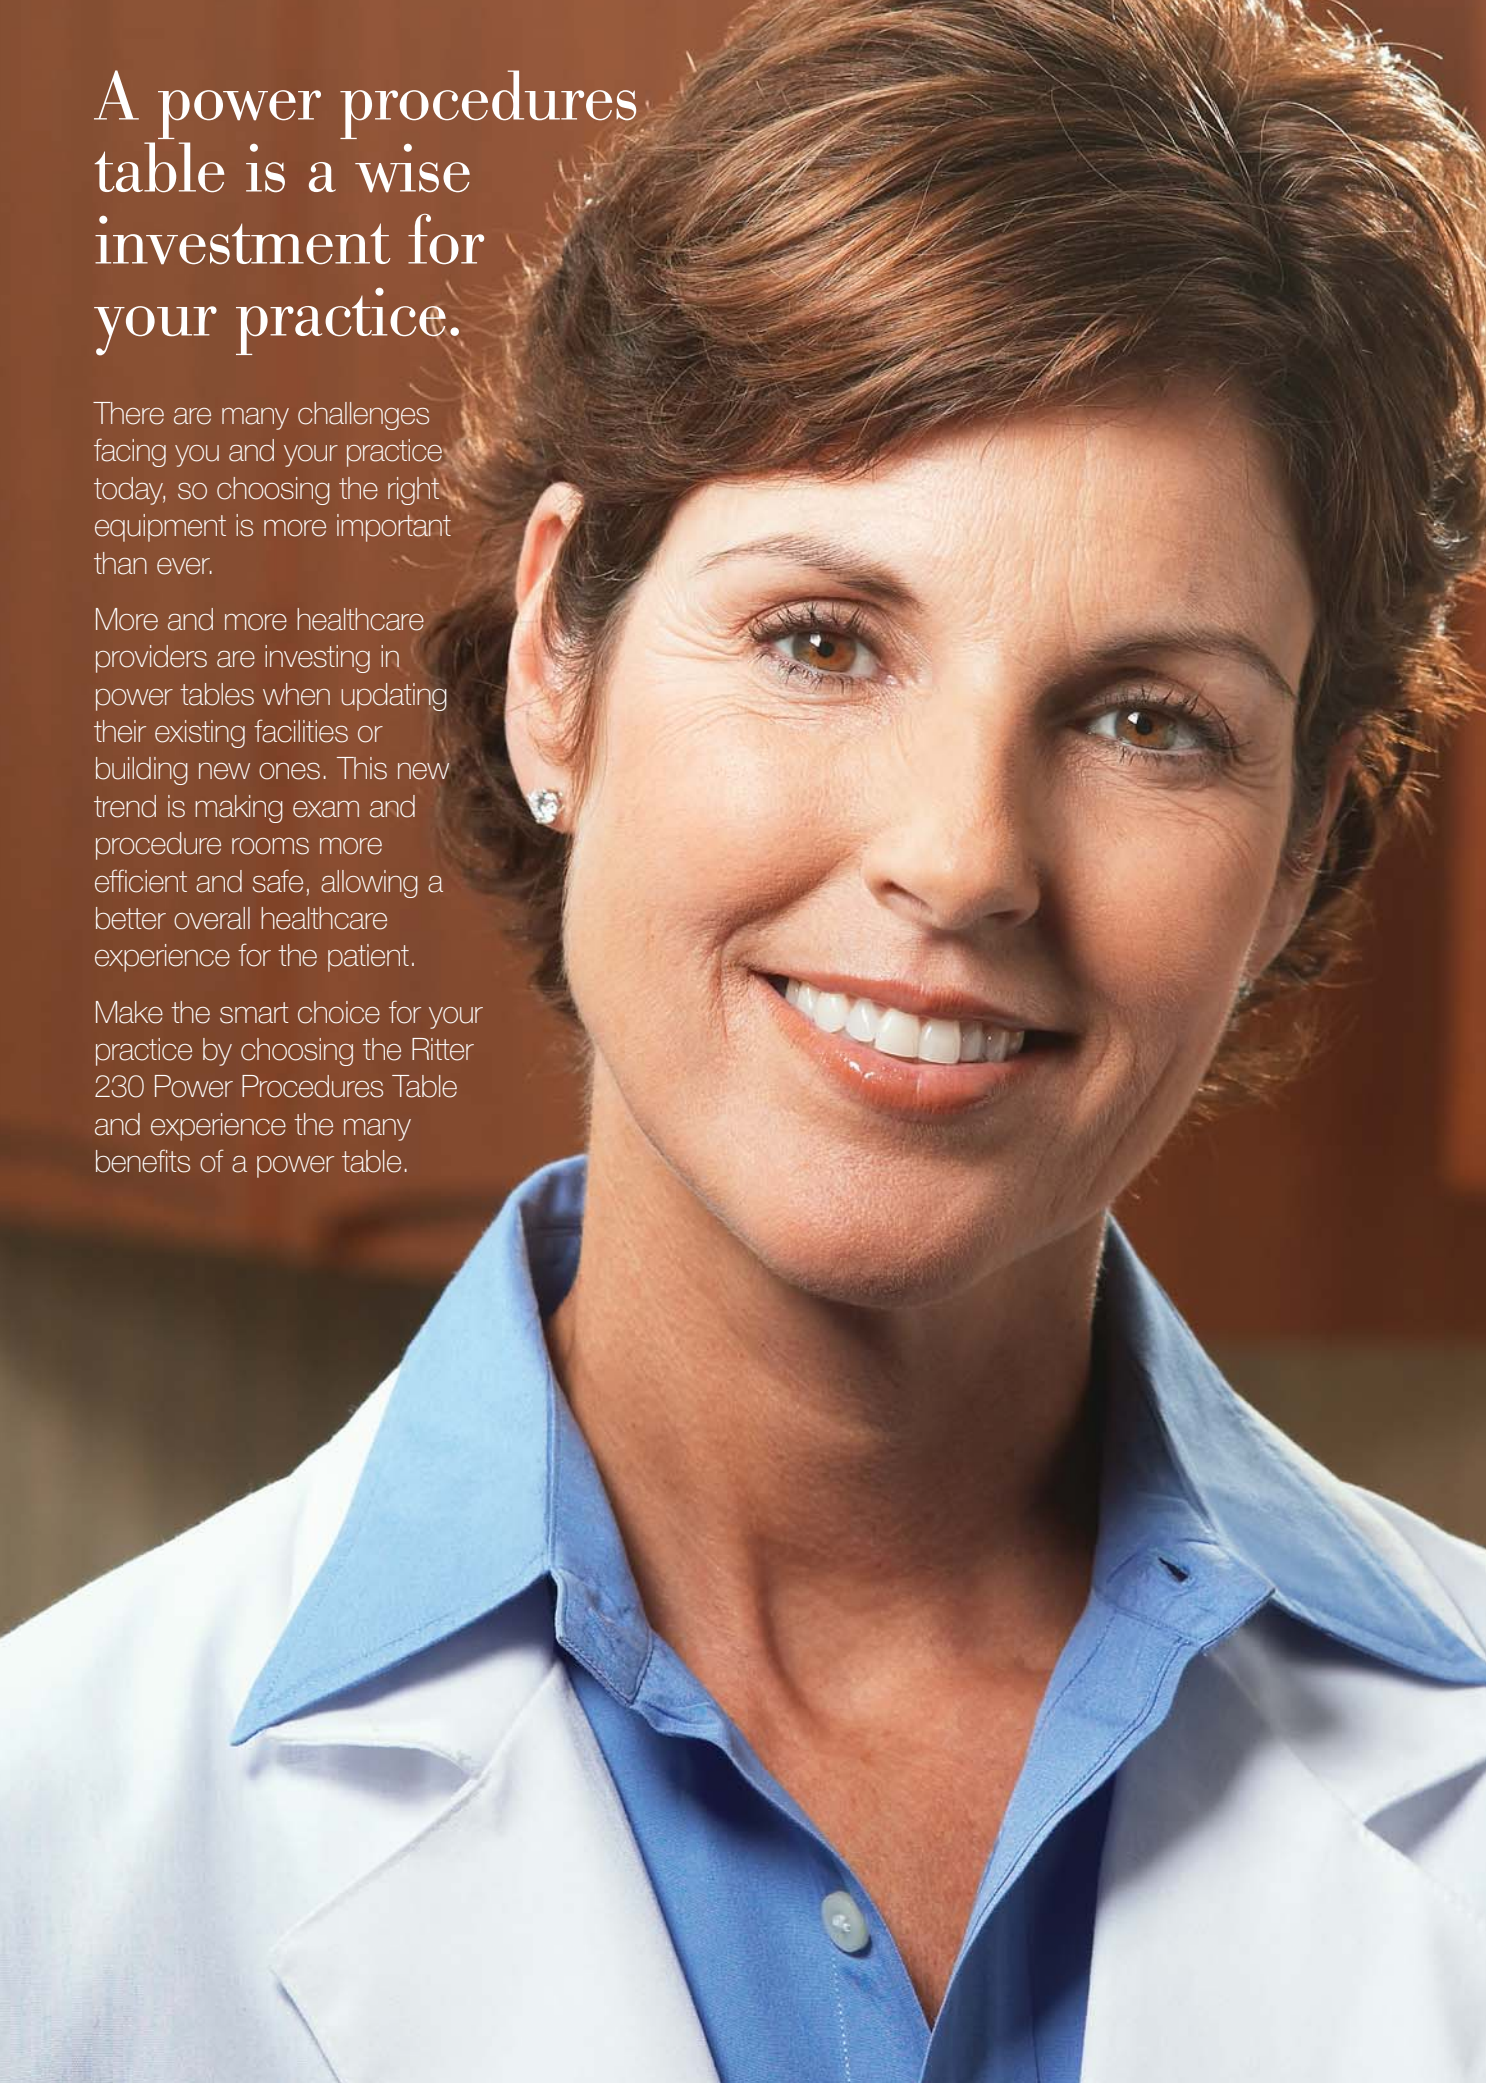

Ritter®
by MIDMARK

A power procedures table is a wise investment for your practice.

There are many challenges facing you and your practice today, so choosing the right equipment is more important than ever.

More and more healthcare providers are investing in power tables when updating their existing facilities or building new ones. This new trend is making exam and procedure rooms more efficient and safe, allowing a better overall healthcare experience for the patient.

Make the smart choice for your practice by choosing the Ritter 230 Power Procedures Table and experience the many benefits of a power table.

230 Universal Pro

The Right Thing to Do... For Your Practice, Your Staff, and Your Patients

As the practice of medicine changes, more procedures are being performed in the office than ever before, making efficiency essential.

Sometimes positioning patients can be a difficult task when dealing with the less mobile, elderly, and special needs patients. The Ritter 230 Power Procedures Table, with its low height and multi-positioning capabilities, improves office efficiency by allowing you and your staff to easily position patients with the touch of a button; reducing the likelihood of fatigue, back and neck strain, and workplace injury.

Patients will feel more comfortable and secure when they can easily get onto a table and experience smooth and steady movement during positioning. Their anxiety will be reduced and they will feel satisfied with the level of healthcare you provide.

Consider the Ritter 230 Power Procedures Table a long-term investment for your practice, your staff, and your patients!

The Ritter 230 Universal Power Procedures Table with power height, back, foot and tilt, allows you to effortlessly and precisely position patients for a multitude of procedures.

Optional hospital grade outlets allow easy access to electrical power, which provides a clean look to the room and floor space free of power cords.

Procedures Table

The Ritter 230 is a power procedures table with basic features, making it very affordable. Better yet, the Ritter brand has been providing quality products to clinics for over 50 years and is recognized as an industry leader.

An easy-to-use foot control powers your patient effortlessly to the desired position, and in addition to a modern look, provides maximum protection against ingress of fluids.

*Product shown with electrical outlet option

The Ritter 230 satisfies your positioning needs...

Lithotomy

Extending the stirrups and treatment pan, lowering the foot support, and slightly tilting the table, provide the perfect lithotomy position for OB/GYN examinations and procedures.

Knee-Chest

The foot support can be easily reconfigured, and the table properly positioned, to set up the knee-chest position for colon and rectal examinations and procedures.

Trendelenburg

Whether better positioning the patient, treating for shock or faintness, or increasing anesthesia onset, the Trendelenburg position offers a full 30° of tilt.

Flat

The table supports examinations and procedures requiring supine, prone, left lateral, or right lateral positioning, when in the flat position.

Low Entry

With the increasing number of elderly and disabled patients, the low entry position makes it easy and safe for the patient to get on and off the table.

Rotation

As office-based settings become equipped with more pieces of equipment and equipment larger in size, such as lasers, rooms are becoming congested. Selecting a procedures table equipped with a rotation option can improve efficiency by allowing the patient to be moved to the equipment, instead of the equipment being moved to the patient.

The simple touch of a pedal (circled in photo) on either side of the table offers 350 degrees of rotation; touch the pedal again to lock the table in place. It's that easy!

Ritter 230 Universal Power Procedures Table
(Shown with adjustable arm system accessory)

The optional adjustable arm system accessory offers a sense of security for patients and a stable and secure platform to assist them in getting on and off the table. With the simple touch of a lever, the arms can be rotated and locked into one of three positions, so the arms are in the right place for you.

An optional hand control accessory provides an alternate method to the foot control for positioning patients.

Specifications

Patient Load Rating:
450 lb. (204 kg)

Height:
Minimum 22.5" (57.2 cm)
Maximum 40" (101.6 cm)
